

## Event Promotion Page: Use Case

### BSTN-Fest

- Open Event Promotion page
- Enable Voiceover: Command + Option + F5, click "Use Voiceover"
- Voiceover starts to read content on screen:
- Read all content on page: Command + Option + A
- Access links: Command + Option + U
  - Since I designed this page before we learned how to make a multi-page site, the links on the event promotion page do not actually work.
- Find lineup: Command + Option + U, then select "Lineup"
- Find ticket prices: Command + Option + U, then select "Presale Tickets"
- Find directions: Command + Option + U, then select "Directions".
  - Embedded directions map isn't working, cannot be read

### Things I noticed:

- When reading page name, seems to repeat the title multiple times
- When reading navigation links, Voiceover says name of site every time as well as link title
- Voiceover reads time and dates as numbers, example: "one-one, colon, zero-zero pm" instead of 11 o'clock pm. Can this be fixed?
- Headings read fine, since page use simple h1-5 semantics

### Fixes:

- Make working navigation links, add more pages to site
- Fix embedded map, if not, replace with text-description of directions
- Add "buy tickets" button / link on tickets page
- Design changes - change fonts and possibly event name
